

# Sports Facilities

Every Component Purpose Designed  
to Protect **Players, Spectators,** and  
**Boundaries.**

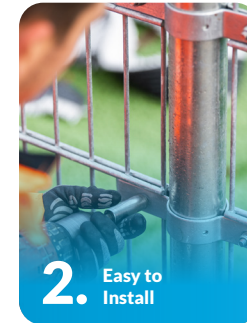

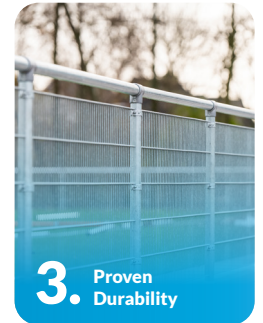

# Making Strong Connections Since 1982

**1.** Your Parts Always in Stock

**2.** Easy to Install

**3.** Proven Durability

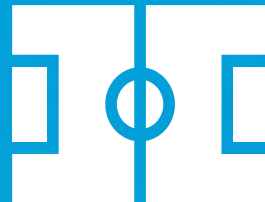

For more than forty years, Buisklem has provided completely reliable solutions for fencing projects. As a trusted wholesaler, our focus is on supplying high-quality products that fully satisfy the demands of professionals, by ensuring strength, durability and ease of use in every application.

Product coating quality has been a key product priority, with significant effort invested in achieving consistent finishes that protect against wear and enhance the overall appearance of fencing systems. The coatings ensure that components integrate perfectly with pipes and panels from other suppliers, delivering a polished and perfectly unified result.

Every project is unique. Our extensive experience across a range of industries enables us to deliver solutions that work. Whether reinforcing existing structures or supporting large-scale new installations, each product is designed and

constructed to perform under demanding operational conditions.

By focusing on reliable service and dependable solutions, Buisklem has become a trusted name for businesses that need a long-term fencing component partnership.

# Our Commitment

Every Buisklem product reflects our promise of quality, precision, and partnership. More than just individual components, each and every connection is designed to contribute directly to the success of your projects.

## Why Buisklem

- A complete focus on customer success, supporting projects from start to finish.
- Extensive stock availability, to ensure fast delivery and uninterrupted projects.
- High-quality products, purpose built for strength and durability.
- Premium coatings with consistent qualities, protecting against wear.
- All products under one roof, simplifying the ordering process.

As a key partner across industries, **Buisklem** focuses on supporting **customer success** by providing products precision-engineered to **meet the demands** of today and tomorrow.

## Markets Overview

Demand for high-quality fencing at **sports facilities** is driven by the need to ensure safety, effectively manage crowds, and clearly define spaces, both for players and spectators. Large stadiums require robust perimeters that comply fully with **safety standards** and robustly withstand heavy use. Smaller training grounds and recreational areas need versatile systems that can adapt to various layouts. This sector prioritises components that combine durability with ease of installation, ensuring quick implementation without compromising performance.

In larger sporting facility projects, strategic deployment of fewer posts, combined with use of longer fencing runs, can safely reduce the overall number of panels and posts needed. This leads to **cost savings** in both materials and installation.

**Buisklem** understands and anticipates the specialised demands of this sector, working alongside contractors, resellers, and industry professionals to deliver parts and solutions to complete sports field projects at every level.

# Ordering Samples. The Process is Simple. And **FREE.**

**Samples** are readily available to help you choose the right product. All samples will be delivered directly to you **without any cost.**

Ensure you select precisely the right products from Buisklem.

# Custom Engineered Solutions

Some projects demand more than the standard options. Adjustments in colour, material or size can be made to ensure that every product fits the exact requirements of your project.

From minor modification to full custom design, each modified solution is carefully manufactured to meet your specifications exactly.

From concept to delivery, every detail is managed with precision, to ensure reliable and effective results.

Custom solutions from **Buisklem** are built with the strength, quality and reliability needed to ensure success.

# 01 BASE PLATES

Base plates anchor fence posts to concrete or asphalt, for a stable foundation. Spectator zone or entrance area positioning enables fencing security during heavy foot traffic events or public gatherings. Precision-engineering ensures structural reliability, even under continuous use or pressure.

Parts are available immediately in the most frequently requested colours (RAL 9005, RAL 6005, RAL 6009, RAL 7016). Other colour options are available on request.

# 02 POST CAPS

Post caps protect fence tops from moisture, debris, and environmental damage, for long-term durability. In areas including spectator boundaries and paths, sharp-edge covering enhances safety. A clean finish improves visual appeal, making post caps key to maintenance of professional environments.

# EXTENDED BRACKETS

Extended brackets secure fence panels to posts, creating a stable connection that withstands impact or vibration. Panel shifting during active use along player zones and boundary fences is prevented. Durable construction ensures fencing remains aligned and reliable, even in demanding environments.

Parts are available immediately in the most frequently requested colours (RAL 9005, RAL 6005, RAL 6009, RAL 7016).

Other colour options are available on request.

# PLASTIC FASTENERS

Plastic fasteners are lightweight, weather-resistant and essential for attaching fencing components securely. In spectator areas or temporary enclosures quick adjustment is possible while maintaining reliable hold. Versatility is ideal to accommodate layout change or sectional repair during events.

# WIRE TENSIONERS

Wire tensioners keep fencing tight for lasting effectiveness.

On training and playing grounds, constant fence tension withstands player interaction, ball impact, and environmental stress. Adjustable designs allow for easy maintenance, ensuring fencing safety and stability in demanding conditions.

Parts are available immediately in the most frequently requested colours (RAL 9005, RAL 6005, RAL 6009, RAL 7016). Other colour options are available on request.

## MESH STRIPS, WALL CONNECTIONS AND TENSION RODS

Mesh strips, wall connections and tension rods secure fencing to walls, stabilising sections under tension for reliable safety. Reinforcing arena or training ground perimeters, the component family enables stable connection by walls, bleachers or changing areas. Flexibility adapts to uneven surfaces.

Parts are available immediately in the most frequently requested colours (RAL 9005, RAL 6005, RAL 6009, RAL 7016). Other colour options are available on request.

# COUPLERS 07

Couplers are essential for strong intersections in fencing systems. Seamless connections are formed where panels meet to divide training grounds and mark boundary lines or player enclosures. Sturdy design ensures fence stability, even in high-use areas, to help maintain safety in dynamic spaces.

Aluminium parts are available immediately in the most frequently requested colours (RAL 9005, RAL 6005, RAL 6009, RAL 7016). Other colour options are available on request.

# T-CONNECTORS

T-Connectors form strong fencing system intersections, linking posts and panels at right angles. Deployed around training grounds, and to mark boundaries or player enclosures, connections are seamless between panels. Strength enables stability, even with heavy use, to enhance safety in busy areas.

Parts are available immediately in the most frequently requested colours (RAL 9005, RAL 6005, RAL 6009, RAL 7016). Other colour options are available on request.

# BARBED WIRE ARMS

1/2

Barbed wire arms fasten barbed wire securely to fence posts, creating a protective barrier. Positioned at the fencing top, the extra security layer deters unauthorised access. Robust construction withstands tension and impact, for reliable perimeter protection of playing fields or restricted areas.

Parts are available immediately in the most frequently requested colours (RAL 9005, RAL 6005, RAL 6009, RAL 7016). Other colour options are available on request.

# STAINLESS STEEL COMPONENTS

Stainless steel components consist of corrosion-resistant fasteners, connectors, and tensioning elements, all designed to keep fencing secure around entrances, playing fields and spectator boundaries. Durable materials withstand harsh weather and frequent use, to maintain stability and reliability.

Parts are available immediately in the most frequently requested colours (RAL 9005, RAL 6005, RAL 6009, RAL 7016). Other colour options are available on request.

# REINFORCEMENT PLATES 11

Reinforcement plates stabilise fencing systems by strengthening joints at stress points. Often used at corner posts by entrances or spectator areas, the plates prevent shifting from impact or heavy use. Durable construction ensures fence security in high-traffic environments such as playing fields.

**4482000**

# STRUT END PIECES 12

Strut end pieces provide essential fence support by stabilising corner posts or tensioned sections. In high-stress areas - perimeter fencing or training enclosures - structural movement is prevented while alignment is retained. Robust materials ensure security even during impact-intensive events.

Parts are available immediately in the most frequently requested colours (RAL 9005, RAL 6005, RAL 6009, RAL 7016). Other colour options are available on request.

# ANTI-CLIMB SECURITY

Anti-climb security deters unauthorised access with spikes and barbed wire arms that anchor the wire securely to posts. By perimeters, above player zones or around storage areas, robust deterrence discourages intrusion. Impact and environmental factor resistance reinforces boundaries during events.

Parts are available immediately in the most frequently requested colours (RAL 9005, RAL 6005, RAL 6009, RAL 7016). Other colour options are available on request.

# SPORTS FIELDS 14

Fencing components for sports fields are designed to meet unique environmental challenges. From marking player zones to securing field perimeters, robust product functionality ensures safety. Reinforced materials handle demands of matches, training sessions and large crowds, to protect participants.

Parts are available immediately in the most frequently requested colours (RAL 9005, RAL 6005, RAL 6009, RAL 7016). Other colour options are available on request.

NOTES

**Solid, reliable** and **built to last** - secure boundaries that stand strong through every game, training session and event are essential to protect people and infrastructure and ensure operational safety. For over 40 years, **Buisklem** has been delivering components that ensure the safety of players and spectators and protect equipment.

Our solutions are designed to meet the challenges of modern sport facilities and deliver performance to rely on, season after season.
